

Statement on the Flood Risk and Land Contamination Assessment for the application for a Glen Farrow GF210 Biomass Boiler installation at Pearson Packages Ltd, Benington Road, Butterwick, Boston.

Flood Risk Assessment.

The proposal is for the installation of a Biomass Boiler. The boiler sits on 4 independent legs on a concrete slab that is generally set at the existing ground level. The proposal will not increase the flood risk elsewhere or affect the function of the existing flood plain.

Land Contamination Assessment.

The proposal will not involve a significant excavation of existing ground. The proposal will also not create future land contamination issues as it will burn surplus wood only and the ash can be taken away to be used for other purposes.
