

# PLAN REFERENCE No: 3

## Confirmation on my proposal

I am going to insulate my house. I want to replace all windows in the house and the front door. I will not change size windows or doors.

My current facade is red-brown brick. My new facade will be in a very similar colour, but I will not use rendering over the top. On a current brick I will put a CLINKIER TILES. I want to insulate the house so I will put adhesive, rock wool, pegs, adhesive, fibre glass rendering and adhesive on the old facade. The top will be filled with a CLINKIER TILES. CLINKIER TILES are the same material that is now used to built my house. I will not use any wooden desk or colored plaster to change the facade. Clinkier tile is like a brick but is a tile who was cut from a brick. It is exactly the same material like a brick.

I need to insulate the house because the house is cold, the wind blows through the windows and there is moisture on the walls. The use this materials that I am talking about will make the house wrmer and it will improve the health and functioning of my family, especially children.

The new elevation will cover the whole house, on 3 walls (because I have semi-detached house).
