

With regards to the Air Quality Assessment

We can confirm that the reason for this access onto the main road, is one of Health and Safety. Currently, the cars leaving the site are mixed with the commercial vehicles exiting the site from the adjacent exit shown on drawing 001A

The Health and Safety manager of the site has decided that personal vehicles should not exit the site through the loading area and the same exit as commercial vehicles

The cars exiting the car park will not add to air pollution, as they are already exiting the site, so this requirement is no longer valid for this application

Kind regards

Richard Pratt
